

WurxOS Help Guide

Employee how-to knowledge base

Training material for the WurxOS Assistant

Wurx Media · Generated 18 June 2026 · 6 topics

What's inside

Each topic below is written as a self-contained knowledge entry. To train the assistant, copy a topic's title and text into **Assistant** → **Train** → **Add knowledge**.

- 1 How to apply for leave (and everything around it)
- 2 How to attend & participate in a weekly Agenda meeting
- 3 How to clock in/out, take breaks, and fix a wrong time (Attendance)
- 4 How to create and submit a weekly report (APC) and the approval chain
- 5 How to create, assign, track and complete tasks
- 6 Pay & Performance: viewing your compensation, incentives, and performance

How to apply for leave (and everything around it)

Use the **Leave** page to ask for time off, work-from-home days, half days, or other schedule requests. Here is exactly how it works in WuxOS.

Where to find it

1. In the left sidebar, open the **Requests** group.
2. Click **Leave**. This opens your **Requests** page, headed "Submit and manage leave, WFH, and other requests."

At the top you will see your remaining monthly quota chips: **Medical**, **Emergency**, and **WFH**, each shown as "remaining / total mo." (defaults are 1 Medical, 1 Emergency, 2 WFH per month). These reset every month.

Submitting a request

1. Click the black **New Request** button (top right). A "New Request" window opens.
2. Choose a **Request Type**:
 - **Leave Request** – then pick a **Leave Type: Medical Leave** or **Emergency Leave**. Each button shows your remaining paid days in parentheses.
 - **Work From Home**
 - **Half Leave** – counts as half a day against your medical quota.
 - **Other** – for things like early dismissal or a schedule change. You must fill in the **What do you need?** box. "Other" uses no quota and is always unpaid.
3. Pick a **Start Date** and **End Date** (both required; end cannot be before start).
4. A **Range breakdown** appears, showing calendar days minus weekends (Sat/Sun) and company holidays. **Weekends and company holidays are never charged to your quota** – only the "actual days" count.
5. Type a **Reason** (required).
6. Click **Submit Request**.

Paid vs. unpaid confirmation

A **Confirm Submission** box appears before anything is sent. It shows how many days are **Paid (from monthly quota)** versus **Unpaid**:

- If you have enough quota, it says "This will be fully paid time off."
- If your quota is used up, the extra days are unpaid. It will note that your **Boss may approve unpaid days as paid retroactively**.

Click **Submit Request** (or **Submit as Unpaid**) to finish, or **Cancel** to go back.

Important limit: you can only have **one pending request at a time**. If you already have one waiting for a decision, you will be told to wait for it to be decided or cancel it first.

What happens next: the approval flow

Your request moves up a chain depending on your role:

- **APC** → Team Leader → Boss
- **IPC** → PCTL → Boss
- **TL / PCTL** → Operations Lead (OL) → Boss
- **Developer** → Boss directly

Your direct approver can either **Approve** your request outright, **Reject** it (with a reason), or tick **Forward to Boss for final approval** so the Boss makes the final call. This is why the status may move through more than one stage.

Checking your status

On the **My Requests** view you will see filter cards: **All**, **Pending**, **Approved**, **Rejected**. Each request card shows a status badge:

- **Pending TL / Pending PCTL / Pending OL / Pending Boss** – still waiting at that stage.
- **Approved** – granted.
- **Rejected** – declined (the rejection reason is shown on the card).
- **Withdrawn** – you cancelled it.

Cards also show who approved or forwarded it and when. Use the **month navigator** at the top to look at other months, and the search box, category dropdown, and From/To date filters to narrow the list.

Withdrawing or cancelling a request

You can pull back a request that is still **Pending**, and you can also clear out one that was **Rejected**:

1. Find the request on **My Requests**.
2. Click the **Withdraw** button on the card.
3. Confirm in the pop-up. It warns that **your quota will be restored** and that this **cannot be undone**.

After withdrawing, the request shows as **Withdrawn** and the days are no longer counted against your quota. (Rejected and withdrawn requests never consume quota.)

How to attend & participate in a weekly Agenda meeting

Weekly Agenda meetings are run from the **Agenda** area of WurxOS. Your Operations Lead (OL) schedules each team's meeting, and the app guides you through joining, attending, and presenting. This guide is for **Team Leads (TLs)** and **APCs**. (The OL is the person who starts, runs, and finishes the meeting.)

Before the meeting: getting notified

- Meetings are scheduled by the **OL**, not by you. Each week the OL "Notifies Teams," which opens that week's meeting for everyone.
- You'll receive a notification when your team's meeting is opened. All meeting times are shown in **Pakistan time (PKT)**.

Finding your meeting

Upcoming Meetings

1. Open **Agenda** → **Upcoming Meetings**.
 2. You'll see week cards for the current month. The current week is highlighted as **Current Week**.
 3. As a TL or APC, your card shows **only your own team's row** — the team lead's name, how many APCs are on the team, and the scheduled time. A status dot shows where things stand: *Not notified, Scheduled, In progress, Paused, or Completed*.
- Note: the **Start Meeting** button is OL-only. You won't see it. You join from the Ongoing page once the OL starts.

Ongoing Meetings (the live room)

1. Open **Agenda** → **Ongoing Meetings**.
2. The moment the OL starts your team's meeting, your team's room appears here automatically — no refresh needed. TLs and APCs always land in **their own team's** room.
3. If nothing has started, you'll see "No meeting in progress" with the note that your team's meeting will appear the moment it starts.

Joining the live meeting

- In the room, click the big green **Join Meeting Now** button to open the team's Google Meet link in a new tab. A red **LIVE** badge shows the meeting is active.
- If no link is set, you'll see a note that an OL needs to add a Google Meet link. Ask your OL if this happens.
- If the OL pauses the meeting, a yellow **PAUSED** banner appears for everyone — just wait for the OL to resume.

What a Team Lead (TL) does

Inside your own team's live room you handle **attendance**:

1. In the **Attendance** strip, each APC on your team is listed.
 2. Tap the green check to mark an APC **Present**, or the red X to mark them **Absent**. Tags update live for everyone.
- Only the TL of that team can mark attendance. The note "Marked by the Team Lead" appears for other viewers.
 - The OL runs the presentation review, so beyond attendance there's nothing else you need to drive. A reminder card confirms this.

What an APC does (presenting your work)

In your team's live room you'll see a **Your presentation** card and, below it, **Your agenda tasks** (the tasks the OL/TL assigned you, with status and any document links).

1. When you're ready, click **Start Presenting**. This puts you live — the OL begins reviewing your tasks and gives an overall summary.

2. Only one APC can present at a time. If a teammate is presenting, your button shows **Locked** until they finish. If the meeting is paused, it shows **Paused**.
 3. When you're done, click **Stop Presenting**. Your card then shows **Presented**.
- Tip: If the OL finishes the meeting while a present APC hasn't presented, the app warns them — so do present before the meeting ends if you can.

After the meeting: Prior Meetings

1. Open **Agenda** → **Prior Meetings** to see completed meetings, grouped by week. Use the month navigator to look back at earlier months.
 2. Click any meeting card ("View record") to open its full record.
- **APCs** see **their own evaluation only** — each task's rating and notes, plus the overall summary of their presentation.
 - **TLs** see their team's attendance, every APC's evaluation, and the Team Lead remarks left for them.
 - Ratings used throughout are: *Excellent, Well Explained, Satisfied, Needs Improvement, Incomplete*.

That's the full cycle: get notified, find your room under **Ongoing Meetings**, click **Join Meeting Now**, do your part (TL marks attendance, APC presents), and review the record afterward in **Prior Meetings**.

How to clock in/out, take breaks, and fix a wrong time (Attendance)

Use the **Attendance** page to track your work hours. Open it from the left sidebar menu item labeled **Attendance** (clock icon). When the **Today** tab is selected you'll see a large clock with your status, today's stats, and the clock-in/out buttons. All times shown are Pakistan time.

Clock in

1. On the **Today** tab, find the big clock card. If you're off the clock it shows a green **Clock in** button.
2. Tap **Clock in**. You'll be asked "*Where are you working from?*" — pick one:
 - **Bahria Office**
 - **Lake City Office**
 - **Work From Home**
3. After you pick a location, your status flips to **Working** and the live **Session** timer starts counting.

Notes:

- You can only have **one shift per shift-day**. Once you've clocked in (and out) for today's shift, you can't start a new one until the next shift day begins, which **rolls over at 3pm**.
- Tip: pressing the **Space** bar also clocks you in or out, and **B** starts/ends a break (when you're not typing in a field).

Take a break

- While Working, tap **Take break** in the buttons under the clock. Your status changes to **On Break** and the session timer pauses.
- Tap **End break** to resume. The time is added to **Breaks Today**.
- You can take more than one break. **You cannot clock out while you are on a break** — end the break first.

Clock out

What happens depends on your role:

- **APC / IPC:** Tap **Clock out**. First, all your **daily tasks must be complete** — if any are still open, you'll get a message naming the brand, and clock-out is blocked until they're done. Then a window appears asking "*What did you work on today?*" — add a short summary and tap **Send Request**. Your status becomes **Awaiting Approval** and your **team lead** must approve it. If your team lead isn't clocked in today (or has turned on "allow team to clock out without approval"), you'll see a note and can clock out directly without waiting.
- **Team Lead / OL / Boss-level roles:** Tapping **Clock out** ends your shift immediately — no approval needed.

If a clock-out request is rejected, you'll see the reason and can finish the work and request again.

If you clocked out by mistake

If you accidentally clocked out, a green **Resume shift** prompt appears ("*Clocked out by mistake? Resume your shift — your time won't be lost*"). Tap **Resume** to reopen today's shift. This only works for the **current shift day** and only for a manual clock-out.

Fix a wrong clock-in / clock-out / break time

Correct your clock-in

1. While clocked in, tap **Edit time** under the clock.

2. Pick the correct time (must be **within the last 18 hours** and **not in the future** — the 18-hour window covers night shifts that cross midnight).
3. **APC / IPC:** add a short **reason** and tap **Send Request**. Your **team lead** reviews it; once approved, your work total updates automatically. A banner shows *"Clock-in edit request waiting for approval."*
4. **Team Lead / OL / Boss-level roles:** the change applies instantly when you tap **Save** — no approval.

Correct your breaks

- Tap **Edit breaks**, adjust each break's start/end (or add/remove breaks), and submit. APC/IPC must add a reason and it goes to the team lead for approval; managers' edits apply on save.

Correct a past day or a clock-out

- Go to the **History** tab, find the day, and use the small **pencil / edit** control on that row to request a time correction (choose clock-in or clock-out, set the time, give a reason). The request goes to your team lead.

Auto-close (forgot to clock out)

- If a shift stays open for about **11 hours** (measured from when you actually started the session), the system **auto-closes** it and caps your time at 11 hours.
- Before that, once you pass **9 hours** you'll see a reminder banner asking *"Still working?"* — tap **Yes, still working** to keep the session open, or **Clock out**.
- If a shift was auto-closed, you'll see a red banner saying you forgot to clock out. Tap **OK** to acknowledge, or **Adjust** to enter the time you actually stopped (APC/IPC adjustments go to the team lead; managers apply directly).

How to create and submit a weekly report (APC) and the approval chain

A practical guide for APCs to fill in a weekly report in WurxOS, submit it for review, and handle a report that gets sent back.

Start a new weekly report

1. Open the **Weekly Reports** page.
2. Click the **New Report** button (top right of the page).
3. **Pick the brand** you're reporting for. If you only have one brand, it's selected automatically and this step is skipped.
4. **Pick the week:**
 - If this brand already has reports, the app auto-detects the next week (the last report's end date + 1 day) and jumps straight into the form.
 - If it's the brand's very first report, you'll see **Set Weekly Anchor**. Choose the **Starting date** and the **Week #** (use **1** for a brand-new chain, or enter the number you're currently on if you tracked it elsewhere before), then click **Confirm Starting Week & Begin Report**. Every future week follows automatically from this anchor.

Choose currency, then fill the sections

At the top, set the **Report currency** — it applies to every money field below (GMV, Spend, CPO, etc.).

Work down the sections. Required sections are marked with a red asterisk:

- **Overall Performance** (required): GMV, Affiliate GMV, Orders, Samples Approved, ROI, Shop Performance Score, Videos Posted, plus **MTD Approved** and **Total Videos (all-time)**.
- **Top Creators** (required): add at least one creator with a name (Add Creator for more rows).
- **Top Videos** (required): at least one row with a creator name, and each named row **must** have a valid **Video Link** starting with **http://** or **https://**.
- **GMV Max Performance** (required): at least one campaign.
- **Product Highlights** (required): at least one product name. The app pre-fills products from your most recent prior report so you only update the numbers.
- **Offsite Performance** (optional): Offsite GMV, TikTok Shop GMV, Off-site Effect %.
- **Current & Upcoming Campaigns** (required) and **Operational Updates** (required): rich-text boxes.
- **Recommendations & Action Items** (optional).

Helpful tools:

- **Insights** boxes use a rich-text editor. Click **Generate with AI** on a section, or **Generate All Insights** in the header, to auto-write insights you can then edit.
- **Copy from previous** (above text boxes) pulls last week's text in.
- **Import from PDF** in the header auto-fills metrics from a Google-Doc-style PDF export — always review before submitting.
- You can **hide** any non-essential section with its toggle (hidden sections skip their required-field checks), add **My Custom Fields** (visible only to you), and turn off **Brand Sections** if your brand defines extras.

Your work **auto-saves locally every 30 seconds**, so a crash or accidental sign-out won't lose it. If you try to leave with unsaved changes, you'll be prompted to save a draft first.

Save Draft vs Submit

- **Save Draft** keeps the report as a draft you can keep editing later.

- **Submit Report** runs validation first. If anything required is missing, you'll get a list to fix. You'll then confirm — and once submitted **you can't edit it** unless a reviewer sends it back.

Two things can block submitting:

- A report for that week was **already submitted** (you can't submit twice for the same week).
- Your **previous week's report is still waiting for OL approval** — that one must be approved first. You can keep drafting in the meantime.

What happens after you submit (approval chain)

1. **Submitted** → goes to your **Team Lead (TL)** to verify.
2. The **TL verifies** it → status becomes **Verified**.
3. The **Operation Lead (OL)** then **approves** it → status becomes **Approved**. The chain is complete.

What "Returned" means and how to fix it

If a reviewer sends your report back, it reopens to you as a **draft** and a red **Report Returned** banner shows the reviewer's name, the time, and the **reason**. A **Return history** is also listed.

To fix it:

1. Open the returned report (it's editable again).
2. Read the reason, make the requested changes.
3. Click **Submit Report** again to send it back up the chain (your old rejection note is cleared on resubmit).

Bi-weekly and monthly reports

These work the same way: pick the brand and period, fill the sections, **Save Draft** or **Submit**, then **TL verifies** → **OL approves**, with the same return-and-resubmit flow. Bi-weekly uses 14-day periods; monthly uses calendar months with its own set of sections.

How to create, assign, track and complete tasks

Tasks let you manage your own to-dos and the work that's been handed to you. This guide walks through finding Tasks, creating one, tracking it, and marking it done.

Where to find Tasks

Open **Tasks** from the left sidebar (or the "Open tasks" link on your dashboard). The page header reads **Tasks** with the subtitle "Your tasks, assigned work and personal to-dos."

At the top you'll see tabs:

- **All** – every task you can see
- **Assigned to me** – work others have given you
- **Personal** – your own private to-dos
- **Inactive** – tasks tied to a paused brand (frozen and read-only)
- **Assigned by me** – only shows if your role can hand work to others

Below the tabs are a search box, status filters (**All / Todo / In progress / Done** with live counts), a **List/Kanban** view switch, and a refresh button. Optional filters for Assignee, Brand, Priority, Category and Due appear when there's more than one option.

Creating a task

1. Click **Add task** (top right). The "Add task" window opens.
2. To make a private to-do, toggle **Personal task** on – it has no brand and is assigned to you only. Leave it off for work tied to a brand.
3. For a non-personal task, pick a **Brand** (optional – you can leave it as "No brand / general task").
4. Choose **Assign to**:
 - If you're an APC (or an IPC without task permissions), the task is automatically assigned to **you** – there's no picker.
 - TLs assign to APCs on their team; Boss/OL assign more widely; the picker only lists people in your scope.
5. Enter a **Title** (required) and an optional **Description**.
6. Pick a **Category**: *General* (one-off), or *Daily / Weekly / Monthly* (these reset automatically on a schedule and a reset hint appears).
7. Choose a **Priority**: Low, Medium or High.
8. For *General* tasks only, set an optional **Due date**. Recurring tasks don't take a due date. You can also add an optional **Link**.
9. (Non-personal) Tick **Notify [name]** to send the assignee an in-app and push notification. Leave it unticked for a silent create.
10. Click **Create task**.

Task statuses and how to move them

Every task is **To do**, **In progress**, or **Done**. On each row:

- Click the **circle on the left** to advance the status one step (To do → In progress → Done → back to To do). This quick click never notifies anyone.
- Or click the **status pill** on the right to pick a status directly. Inside that menu you can tick a **Notify** box before choosing, so the other person is told about the change.

You can change a task's status if you're the assignee, the creator, an admin, or the brand owner. To select several at once, tick their checkboxes and use the bar that appears: **Mark to-do**, **Mark in progress**, **Mark done**, or **Delete**.

Marking a task complete

Set the status to **Done** (single-click the circle until it shows a check, or pick **Done** from the pill). Completed tasks show "Completed" instead of a due date and the title is struck through.

Viewing details, comments and attachments

Click a task's title to open its detail window. It shows status, priority, category, due date, **Assigned to**, **Assigned by**, brand, link, description, and timestamps.

- **Comments:** type in "Write a comment..." and click **Post**. Everyone who can see the task sees the thread. You can delete your own comments (Boss can delete any).
- **Attachments:** click **Upload** and pick a file (max 10 MB). Click a file name to open it; delete files you uploaded with the X.

The same comments and attachments appear when editing a task. Only the creator, an admin, or the brand owner sees the **Edit** button.

Good to know

- **Notifications** are always opt-in – assignees are only pinged when the **Notify** box is ticked.
- **Recurring** (Daily/Weekly/Monthly) tasks reset on their own and never show as overdue.
- Tasks under a **paused (inactive) brand** are **Frozen**: status, edits and deletes are locked until the brand is reactivated.

Pay & Performance: viewing your compensation, incentives, and performance

This guide explains where to see your pay and how your incentives and performance show up in WurxOS. Everything here is what a regular employee can view; setting salaries, verifying payouts, and rating people are manager/Boss actions.

My Compensation (your salary and history)

Open **My Compensation** from the left menu (every role except Boss has this; Boss accounts have no payroll record).

You will see two tiles at the top:

1. **Current fixed salary** — your basic monthly salary in PKR, with the date it became effective. If the Boss hasn't set it yet, this shows "Not set."
2. **Hire date** — your start date and how many years you have completed.

Below that is **Change history**, a full record of every salary change with these columns:

- **When** — the effective date
- **Reason** — Initial, Annual increment, Promotion, Adjustment, or Correction
- **Change** — the old amount to the new amount, plus the percentage change
- **By** — who made the change
- **Notes** — any note the Boss left

This page is read-only. To get a salary set or corrected, ask the Boss.

Incentives & Bonuses

Open **Incentives** from the menu. You'll land on **My Incentives & Bonuses** for the current month.

- Use the **month picker** at the top to view a different month; click **Current** to jump back.
- If nothing is set up, you'll see "No incentive plan yet" — your Operations Lead (or the Boss) sets these up.

When a plan exists, your card shows:

- **Basic Salary, Earned** (completed items), and **Total Earned**, plus the **Potential** total if you complete everything.
- An **overall completion** progress bar (X of Y items, percentage).
- Status badges: **Verified** (TL/Boss verified) and **Payout Cleared**.

To update your numbers:

1. Click **Edit Progress**.
2. For each incentive or bonus, enter your **Achieved** value. The **Target** is set by your Operations Lead and is read-only for you.
3. An item is automatically marked **Completed** once you reach **90% or more** of its target.
4. (APCs) You can tick **Notify team lead of progress update** to ping your manager.
5. Click **Save Progress**.

Click **View Details** to see each item, its target, what you achieved, the percentage, and who marked it complete — without editing.

Notes:

- Final pay is **verified by your Operations Lead** (APC/IPC) or **the Boss** (Team Leads/Operation Leads).
- Once **Payout Cleared** is set, the Edit Progress button disappears and the month is locked for you.

Performance Review

Open **Performance** from the menu. As a regular employee (APC/IPC) you'll see only your own data under **My Performance**. Team Leads, Operation Leads, and PCTLs also get a Team tab.

At the top you'll see your **Composite Score** (0–100) and a level:

- **Promotion** (90+)
- **Good** (70–89)
- **Warning** (50–69)
- **Termination** (below 50)

If your manager hasn't rated you yet for the month, it shows **Not Rated Yet** — ratings are done at the end of the month by your TL or OL.

Your score is built from four pillars, each shown as a bar with its weight. **Click any pillar row to expand it** and see how it was calculated:

- **Performance Tracking** — six metrics (Daily Tasks Quality, Reporting, Punctuality, Overall Workflow, Response Time, Efficiency), each rated 0–100 by your manager.
- **Bonus & Incentives** — your completed items divided by total items.
- **Attendance** — covered days divided by days in the month; weekends, company holidays, and approved leave are auto-credited.
- **Monthly Flags** — starts at 80; each green flag this month adds points, each red flag subtracts. Flags only affect the month they were created in but stay visible in history.

Below that you'll see your **Flags** list (who flagged you, when, and which month it affects) and, if any exist, your **Warnings (X/3)**. Use the month picker to review past months.
