

One system that runs an entire affiliate agency — brands, people, client reporting, pay and performance.

Replaces the usual pile of spreadsheets, chat threads and calendar reminders with a single place where work is assigned, done, reviewed, rated and paid for.

WHY IT EXISTS

The problem

- Client reports live in scattered docs with no review trail
- Nobody can say who is accountable for which brand
- Bonus calculations are manual, late and disputed
- Performance reviews rely on memory, not evidence

What OpsDeck does

- Every brand has one named owner and one coordinator
- Reports follow a fixed approval chain, end to end
- Pay is calculated from data the team already enters
- Scores are built from attendance, output and reviews

HOW A WEEK RUNS

1 · Clock in Shift starts, daily tasks appear	2 · Checkpoint Per-brand numbers prepared	3 · Team meeting Present, get rated, take actions	4 · Client report Draft → verified → approved	5 · Month end Incentives verified and paid
---	---	---	---	--

CORE MODULES

01 Brands & clients

- Every brand with its owner, coordinator, tier and status
- Monthly revenue, ROI and sampling goals per brand
- Each brand reports in its own currency
- Temporary cover with an expiry date when someone is away

03 Attendance & leave

- Clock in and out, breaks, office or working from home
- Forgotten clock-outs auto-close and ask for acknowledgement
- Correction requests routed to the team lead
- Leave requests with an approval chain and paid/unpaid split
- Monthly attendance % from real records, holidays excluded

05 Incentives & pay

- A monthly plan per person, built from brand-linked targets
- Four sources fill themselves in: attendance, team roll-up, ad revenue, commission tier
- Commission tier pays a % of revenue above a benchmark, converted to local currency at a set rate
- Verify → pay → freeze: a paid month never recalculates
- Salary, history and total payout in one view

02 Client reporting

- Weekly, bi-weekly and monthly reports
- Fixed sections: performance, creators, videos, ads, products
- Draft → submitted → verified → approved, named at every step
- Star-rated by the reviewer; ratings feed performance
- Share a read-only link with the client, no login needed
- Export to Word or PDF

04 Performance

- One score per person per month, from four weighted pillars
- Review scores, incentive completion, attendance, conduct flags
- Bands: promotion · good · warning
- Green and red flags with a written reason and an author
- Simulator to test weighting changes before applying them

06 Weekly meetings

- Each team has its own meeting day, time and link
- A live presentation queue: start, present, rate, finish
- Per-brand checkpoint decks prepared beforehand
- Meeting ratings roll up into the monthly score
- Action items become tracked tasks with owners

CORE MODULES, CONTINUED

07 Tasks

- Assigned per person, optionally tied to a brand
- Daily, weekly and monthly recurring, resetting on their own
- Priorities, due dates, comments and attachments
- Work reassigns automatically when someone goes on leave

09 Knowledge base

- Standard procedures and how-to articles
- Proposed, reviewed and approved before publishing
- Acknowledgement tracking: who has read what
- Visibility per role or per person

11 Analytics

- Per-brand goal tracking, month on month
- Revenue, ad spend, sampling and creator output in one view
- Cross-channel lift analysis
- Client portal for read-only sharing

08 Team & access

- Eight roles, each with its own navigation and permissions
- Access enforced in the database, not just hidden in the interface
- Org chart, lead reassignment and brand switching tools
- Deactivating someone preserves everything they produced

10 Notifications

- In-app and push, on desktop and phone
- Per-category preferences per person
- Snooze or mark read straight from the notification
- Reminders for reports, meetings and clock-ins

12 Integrations & admin

- Pulls shop data to fill reports automatically
- Ad account linking for spend and per-video results
- An assistant answering questions from the team's own procedures
- Full data export as a single backup file

WHO SEES WHAT

ROLE	SCOPE
Founder	Everything — payroll, every brand, company-wide performance
Operations Lead	Runs the week: verifies pay plans, rates the team, chairs meetings
Team Lead	Their own group of brands and the coordinators running them
Paid Collab Lead	Creator deals, budgets and the coordinators on that side
Ads Manager	Ad performance on granted brands only, nothing else
Brand Coordinator	The one to three brands they run, day to day
Creator Coordinator	Paid collaborations; no affiliate brands, by design
Developer	Build queue and bug reports

Access is real, not cosmetic

Permissions are enforced by the database on every request. An Ads Manager signed in on their own laptop cannot retrieve a brand they were not granted, even outside the app. Hiding a menu item is not the same as denying access — here it is both.

ALSO WORTH KNOWING

- Runs in any browser; installs as an app on desktop and phone
- Survives unreliable connections without losing work
- Live updates — changes appear without refreshing
- Sensitive changes recorded with who and when
- Paid and approved records frozen against later edits
- Light and dark themes, per person

Try it

Demo `opsdeck-demo.vercel.app`
 Sign in `adrian.vance@meridian.example.com`
 Password `OpsDeckDemo!2026`

Use the bar at the bottom of the screen to switch roles — it genuinely signs you in as that person, so what you see is exactly what they are allowed to see. Every person, brand and figure in the demo is invented.
